The problem

Paolo Stellari Derived Torelli Theorem and Orientation

<ロ> <同> <同> < 同> < 同> < 同> 、

The generic case The general projective case Motivations The statement Ideas form the proof The conjecture

The problem

Let X be a K3 surface (i.e. a smooth complex compact simply connected surface with trivial canonical bundle).

Main problem

Describe the group $Aut(D^b(X))$ of exact autoequivalences of the triangulated category

$$D^{b}(X) := D^{b}_{Coh}(\mathcal{O}_{X}\text{-Mod}).$$

The generic case The general projective case Motivations The statement Ideas form the proof The conjecture

The problem

Let X be a K3 surface (i.e. a smooth complex compact simply connected surface with trivial canonical bundle).

Main problem

Describe the group $Aut(D^b(X))$ of exact autoequivalences of the triangulated category

$$D^{b}(X) := D^{b}_{Coh}(\mathcal{O}_{X}\text{-Mod}).$$

Remark (Orlov)

Such a description is available when X is an abelian surface (actually an abelian variety).

The strategy Deforming kernels Concluding the argument

The conclusion

Properties of \mathcal{G}

• $\mathcal{G}_0 := i^* \mathcal{G}$ is a sheaf in **Coh**($X \times X$).

Paolo Stellari Derived Torelli Theorem and Orientation

The strategy Deforming kernels Concluding the argument

The conclusion

Properties of \mathcal{G}

- $\mathcal{G}_0 := i^* \mathcal{G}$ is a sheaf in $\mathbf{Coh}(X \times X)$.
- 2 The natural morphism

$$(\Phi_{\mathcal{G}_0})_*: H^*(X,\mathbb{Q}) \to H^*(X,\mathbb{Q})$$

is such that $(\Phi_{\mathcal{G}_0})_* = (\Phi_{\mathcal{E}})_* = j$.

$$(\Phi_{\mathcal{G}_0})_*: H^*(X,\mathbb{Q}) \to H^*(X,\mathbb{Q})$$

is such that $(\Phi_{\mathcal{G}_0})_* = (\Phi_{\mathcal{E}})_* = j$.

Notice that \mathcal{G}_0 and \mathcal{E} have the same Mukai vector!

크

The strategy Deforming kernels Concluding the argument

The conclusion

The contradiction is now obtained using the following lemma:

Lemma

If $\mathcal{F} \in \mathbf{Coh}(X \times X)$, then $(\Phi_{\mathcal{F}})_* \neq j$.

The strategy Deforming kernels Concluding the argument

The conclusion

The contradiction is now obtained using the following lemma:

Lemma

If $\mathcal{F} \in \mathbf{Coh}(X \times X)$, then $(\Phi_{\mathcal{F}})_* \neq j$.

Open question

Which is the kernel of the map $\operatorname{Aut}(D^{\mathrm{b}}(X)) \to \operatorname{O}_{+}(\widetilde{H}(X,\mathbb{Z}))$?
